

Introducing RoboFarm

RoboFarm is an idle, cozy, automation, incremental game. Deploy robot workers, unlock powerful upgrades, and watch your crops thrive while you relax, raising profits to your satisfaction. Save and share your creations, tune in with the music, and experience the world of RoboFarm.

The Team

The team comprises Fabrizio Ferrari and Edward Ferrari, father and son, sharing a passion for programming.

Fabrizio Ferrari has been programming computer systems and the web since 1984. Edward Ferrari, on the other hand, recently began his programming journey and is currently pursuing a computer science degree at the University of California, Irvine.

History of the game

The game began as a simple, enjoyable project that has since transformed into a full-time endeavor for both of us over the past six months. This is our first game, and we genuinely hope that people will find it enjoyable to play.

The game's structure offers an endless supply of gameplay hours, unlocking combinations and random events that create an ever-changing gaming experience.

The game revolves around constructing an automated farm, starting with a single robot-farmer and a single tile. From there, you can add various types of tiles to build your farm.

Path tiles are used to provide a path for your robots.

Dirt tiles serve as the substrate for planting vegetables.

Hey and Grass tiles are used to place decorations and power stations.

Currently, the full game includes 35 levels, each of which unlocks a new vegetable to be planted. Eventually, these vegetables lead to the unlocking of new decorations or power stations.

Harvesting vegetables rewards you with cash. Decorations provide various benefits, while RoboTokens, another currency, can be used to purchase items. Power-ups enhance your production in different ways.

The primary objective of the game is to build and enjoy it. There are no end-games, and there are no limitations on the amount of money you can earn.

Build Your Dream Farm

Enhance your futuristic farm with decorative upgrades, powerful boosts, and hardworking automated robots that keep everything running smoothly. Create from small garden patches to giant farms, customizing every space with handcrafted designs that show off your style. Unlock new crops, expand into fresh zones, and add upgrades for nonstop efficiency and profit. Build smarter, grow bigger, and turn your automated oasis into a thriving robotic empire.

Start Small and Earn Money to Build Your Farm

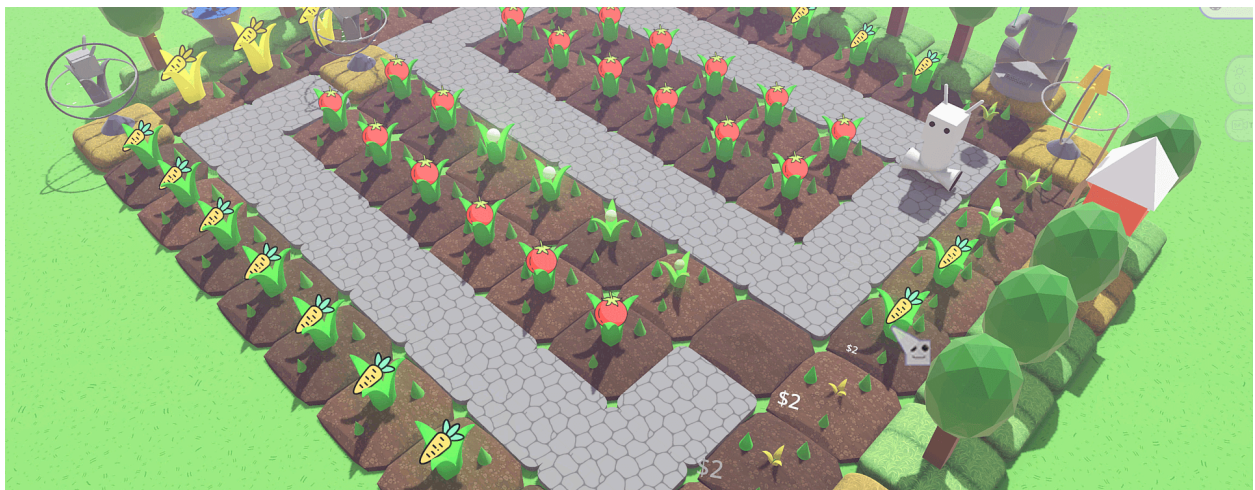

Unlock unique produce, decorate your land with custom creations, and watch your income soar. Use top-down mode to build and design your farm more effectively. With top-down mode, you have a clear view of your farm. Easily construct paths, harvest plants, and enjoy the view. Then upgrade, automate, and keep pushing your farm's value higher.

Build Farms of Any Size

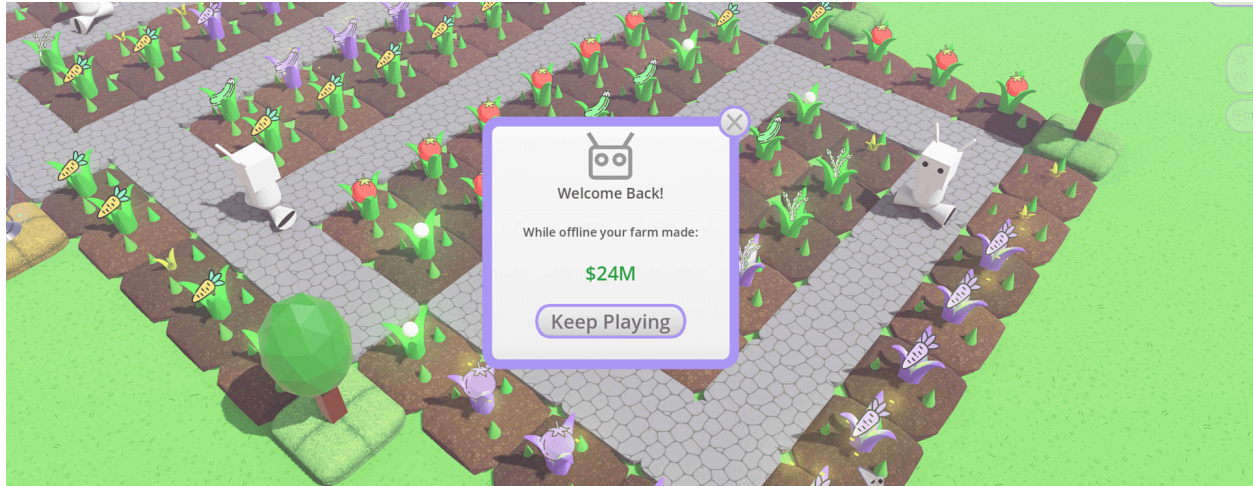

From small farms to medium, big, and gigantic farms, grow your own vegetable paradise from the ground up. Start with a few patches of soil, expand your fields, and plant a colorful variety of crops. Every harvest brings rewards and gets you closer to the next level.

Manually Harvest to Level Up

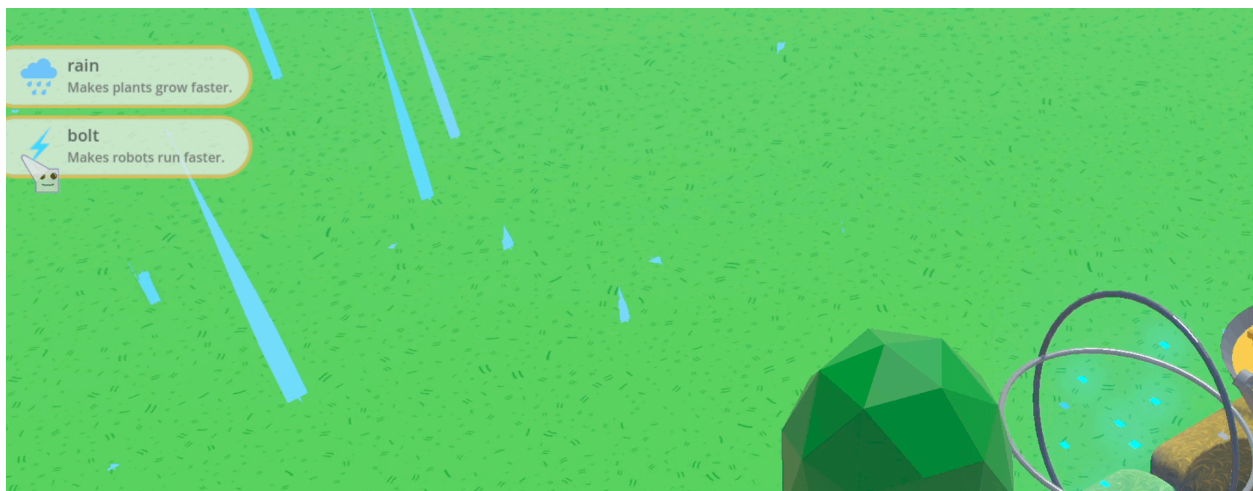

Speed up the development of your farm by harvesting manually. While your trustworthy robots handle most of the work, stepping in yourself gives an instant boost to productivity. Earn achievements, level up faster, and make extra profit as you lend a helping hand to your automated crew.

Earn Even While Offline

Your farm will make money even when you are offline, so progress never stops. Harvest crops by hand to level up, unlock new produce, and boost your income through strategic upgrades and automation. Place powerful decorations to enhance efficiency, then step away while your robot workforce continues to generate rewards. Save and share your farm creations with other players, create multiple farms, and return at any time to expand, optimize, and push your profit potential even further.

Natural Events and Power-ups for Powerful Synergies

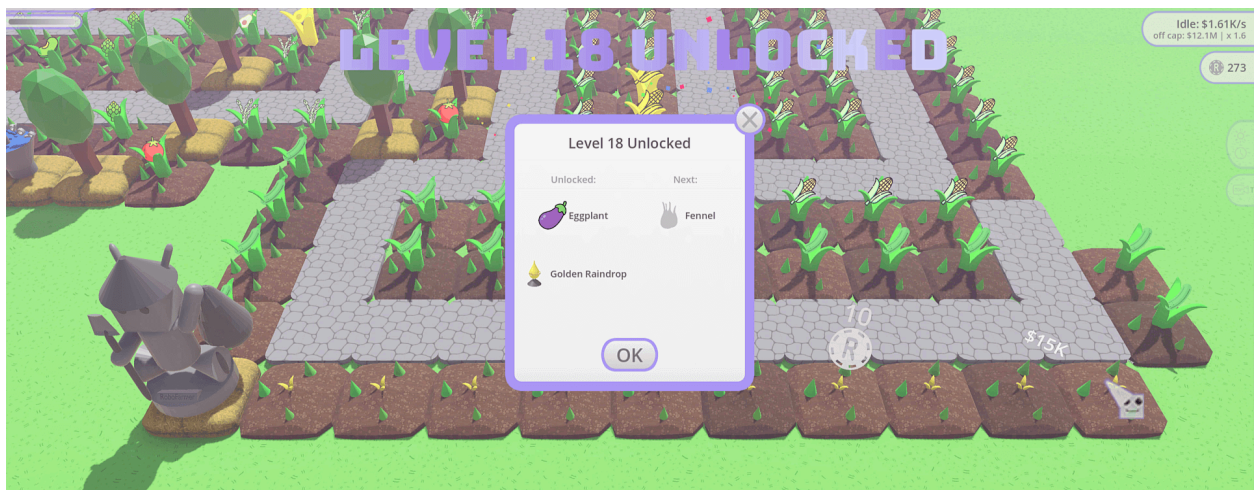

Enhance your farming efficiency with different elements. Different types of natural rain modify your game, either positively or negatively. With power stations, you can manually toggle powers that give you significant, temporary boosts for your farm. Add special decorations that increase your harvest value, augment positive natural events, or improve your offline earnings.

Customize the Environment

Take complete control of your farm's atmosphere with dynamic lighting and time-of-day settings. Rotate the sun, cast dramatic shadows, and adjust the mood to match your creative vision. Switch to nighttime to watch your robots, plants, and decorations glow with vibrant illumination. Whether you want a bright, colorful daytime farm or a calm, neon-lit tech oasis, you can personalize every moment of your world.

Collect RoboTokens

RoboTokens are your essential currency for expanding creativity on the farm. Use them to unlock new robots, powerful upgrades, and decorations that enhance both style and productivity. Earn RoboTokens by leveling up or placing special décor that generates them over time. The more you collect, the more freedom you'll have to shape your farm exactly the way you imagine.
